

CON EDISON INCENTIVE AND REBATE PROGRAMS

ENERGY EFFICIENCY	
Residential Heating, Ventilation, and Air Conditioning Program	Con Edison will help you defray the costs if you are considering improvements to your heating and cooling equipment, water heater, or duct and air sealing. You must be a Con Edison customer, live in a 1- to 4-family home, and purchase and install eligible high-efficiency heating and cooling equipment.
Residential Appliance Recycling Program	If you have an old freezer or refrigerator, we will pay you \$50 each to remove and recycle them free of charge. When we pick up the freezer or refrigerator, we'll also take old wall or window A/Cs and give you \$25 each.
Residential Appliance Rebate Program	Receive a \$75 rebate for the purchase of a CEE Tier II or III rated refrigerator. Con Edison also offers rebates for the following ENERGY STAR products: dehumidifiers \$20, room air conditioners \$30, dishwashers \$50, and clothes washers \$35.
Multifamily Program	Residential building owners of 5 or more units can receive electric and gas incentives for upgrading to cost-effective, energy-efficient equipment, plus free installation of certain energy-saving items. Special incentives are also available for buildings that qualify as affordable housing.
Small Business Direct Install Program	Get a free energy survey at your business. The survey identifies lighting, refrigeration, and other upgrades you could complete to save. The program has approved contractors who can install these energy saving measures, and Con Edison will pay up to 70 percent of the installation cost.
Commercial and Industrial	Receive cash incentives for installing energy-efficient electric and gas equipment and technologies. Rebates are available for measures including lighting, HVAC, motors, VFDs, and controls. Performance-based incentives are available for energy-saving upgrades to chillers, data centers, IT systems, elevators, and industrial process improvements. Funding is also available for energy-efficiency technical studies.
DEMAND RESPONSE AND DEMAND MANAGEMENT	
Central-Air Conditioning Program	Get a free smart thermostat (\$400 value) that allows you to adjust your central A/C from your smart phone or tablet. If you buy or already have an eligible smart thermostat from an approved provider, you could get an \$85 rebate.
Connected Devices Program	Try a smart A/C kit or a Wi-Fi A/C to remotely control and monitor your A/C, help provide reliable power to your community, and earn incentives.
Demand Response	Get paid to reduce your energy use during times of need—the less you use the more you earn.
Demand Management	Con Edison is offering enhanced incentives for projects that achieve a peak reduction of 50 kW or more. Eligible projects include thermal and battery storage, chiller/HVAC/BMS/controls, lighting/LED, demand response enablement and fuel switching non-electric A/C.
Neighborhood Program	Specific energy-saving and management solutions, incentives, and opportunities for communities where demand for electricity is expected to grow significantly.
Oil-to-Gas Conversion	Call 1-800-643-1289 for more information about converting from oil heat to natural gas.
Targeted Steam A/C Incentive Program	Incentives are available for customers who 1) upgrade to new steam chillers, 2) switch from electric chillers to steam chillers, or 3) install steam chillers in lieu of electric chillers in new construction or major renovation projects.

Restrictions apply. Refer to program eligibility requirements and other terms and conditions.
Religious and nonprofit organizations call 1-877-870-6118 to learn about program eligibility.
